

MongoDB Empowers 1 Million+ Learners Across Complex Ecosystem with Thought Industries

MongoDB had an ambitious vision to serve multiple external and internal audiences with MongoDB University and needed a robust, extensible learning platform to do it.

THE CHALLENGE

MongoDB had a business critical need to move beyond a limited homegrown solution to scale the delivery of world-class content to reach millions of learners externally and thousands of learners internally.

THE SOLUTION

MongoDB sought best-in-class tools to create a personalized journey for MongoDB University learners. After choosing Thought Industries to be its learning platform, they focused on:

- Creating a scalable learning experience using powerful core Thought Industries functionalities, including its multi-tenant solution, Panorama, to serve multiple external and internal use cases.
- Using a wide range of native and custom integrations to tackle targeted use cases.
- Offering custom learner dashboards using Thought Industries' component-based architecture, Helium, to fulfill their charter: world-class training on MongoDB's products and technologies.

We want to provide a holistic learning experience for our learners which includes content, certification, knowledge checks and hands-on labs. Helium allows us to bring in learner progress data into the TI Dashboard from other technologies that are integrated with Thought Industries. The Dashboard is key to keeping learners informed and to continue learning with us."

Raghu Viswanathan
Vice President of Education,
Academia and Documentation,
MongoDB

"Our users can easily navigate through the platform, and that's been a huge benefit for us. It's part planning and part platform that has allowed our learners to be able to easily navigate, find what they want, find what they need, and do the learning that they need to do and get back to their day-to-day activities."

Grace Filkins, Learning Operations Manager, MongoDB
