

# Tracking benefits at PMS International

Operational routing and scheduling

Supermarkets and wholesalers

Telematics

**When PMS International installed Paragon's route planning software to improve the scheduling and management of its 30-vehicle nationwide distribution operation, it expected to see a return on its investment in eight months.**

It is now predicting a payback in less than that timeframe as mileage, fuel and planning costs are reduced in its 220 drop-per-day operation and likely savings of £200,000 are expected within the year.

The Paragon software has replaced a regional manual planning system, introducing considerable efficiencies by managing daily deliveries of 7,000 toy and household products from one central location. And the addition of [Paragon's Route Execution](#) module to unite Paragon's plans with live fleet tracking has added real-time visibility and performance monitoring which means PMS knows precisely where to target additional savings.

**"Running Paragon in conjunction with NAVMAN Wireless' OnLine AVL tracking service is saving us a lot of planning and administration time and ensuring that all our vans are used efficiently. We estimate that the combined solution could save the business £200,000 by the end of its first year of operation."** Neil Beverley, Operations Director, PMS International

## Quick facts:

- NAVMAN Wireless vehicle tracking
- Toy and household product distribution
- 30 vehicles
- 220 drops per day
- 1 central depot

## Benefits reported:

- Easy integration with vehicle tracking
- Estimated payback in less than 8 months
- Expected savings of £200,000 within the year
- Reduced mileage, fuel and planning costs
