

CREATED A MULTI-FACETED TRIP PLANNER APP TO SIMPLIFY BOOKINGS

Client's Requirements and Project Challenges

Travelers are always on the lookout for a convenient platform where they can perform their travel-related bookings at one place instead of multiple places. The mobile app developers at FWS helped develop a mobile trip planner app to facilitate such requests. The app served as a one-stop-shop for all travel-related bookings such as air and ground transport, hotels, sightseeing services, etc.

Our client expected the app to have advanced functionality, including the ability to send booking confirmations through email, provide regular status updates through SMS, display multiple choices for hotel bookings, pre-arrange cars for pickup, etc.

As the requested feature-list was extensive, our team of experienced mobile app developers had to face quite a few challenges during the development of the travel booking app, including the following:

- + It was imperative that the trip planner app featured a simple user interface with a good looking design, and had a UX which could be easily grasped by youngsters and adults alike
- + The major requirement from the client was that all travel-related bookings such as travel, hotels, etc. should be integrated on a single platform

The Flatworld Solution

Our developers began work on the project while keeping all express client requirements for the vacation planner app in mind. In order to ensure that all requirements were met adequately, and within the assigned budget, the following solution was provided by us:

- + We assigned a team of highly qualified mobile app developers to work on the client's project
- + The following features were incorporated into the trip planner app:
 - Travelers could book tickets for different airlines, railway, or even bus to any destination
 - The app could be used to check for real-time ticket availability and the latest booking status
 - Cabs could also be booked on the go, including airport pickups and drops
 - The latest travel packages offered by various travel agents were highlighted so that travellers could book package deals easily
 - Travellers could cancel or postpone their bookings and receive an e-mail notification for the same
 - Travelers could also save details of past trips for future reference
- + The travel planning app also featured in-depth and fully secure payment options, including support for PayPal, credit cards, or bank transfers

Project Results

The client was extremely satisfied with the travel booking app developed by our team, as it solved their problem of not having a one-stop shop for all travel-related bookings. With the help of our app, the client was able to reach out to hundreds of new users, by providing them with a value proposition in the form of an all-in-one travel bookings and management app.
