In the Field with Suffolk: How Trunk Tools Helps Crews Build Smarter

Discover how Suffolk's Miami construction team uses Trunk Tools' AI agents to streamline inspections, clarify scopes, and eliminate jobsite delays—saving time and boosting efficiency in the field.

In the Field with Suffolk: How Trunk Tools Helps Crews Build Smarter

On a jobsite, every second counts. Between tracking inspections, coordinating subs, and navigating shifting deadlines, project teams don't have time to chase paperwork or dig through outdated manuals.

That's why **Suffolk's** project team at the construction site in Miami turned to **Trunk Tools**.

"My first company? I had to scan drawings page by page—it was horrible," says Chris Force, Senior Project Manager at Suffolk, "Now I can draft a spec with Trunk, walk the site, and ask questions as I go. It gives me the answer right away. Why isn't every job using this?"

From clarifying scope on the fly to verifying inspections in real-time, the Suffolk team relies on Trunk Tools' **jobsite-trained AI agents** to eliminate bottlenecks and get straight to the build.

"Before, a superintendent might jot something down to check later. Now, they just open **TrunkText**, verify instantly, and move on. That's not homework anymore—it's handled."

In fast-paced environments like construction projects—where two buildings race toward the same TCO—Trunk Tools helps teams move faster, reduce errors, and cut down rework. The result? Better coordination, bulletproof scopes, and hours reclaimed every week.
