

Voiceland relies on YugabyteDB to deliver highly available VoIP services so customers **never miss a call**

## AT A GLANCE

Voiceland helps businesses get the most reliable and cheapest VoIP telephony for calls to Greece and all international destinations to boost business productivity and reduce telecommunication costs.

Voiceland needed a high-performance database to power its new VoIP telephony SIP platform that could be deployed anywhere, including any on-premises data center and cloud.

Voiceland chose YugabyteDB over Google Spanner because it is cost-effective and runs on Google Cloud Platform (GCP), Amazon Web Services (AWS), and on premises.

Voiceland provides reliable telephony services for modern businesses, and uses cloud native infrastructure to deliver it.

Voiceland was founded in 2011 by experienced IT executives based in Athens, Greece. The main focus of the company is to provide specialized telecommunications services aimed primarily at businesses and professionals, including the design and installation of VoIP and VoIP call centers.

## KEY DATABASE REQUIREMENTS

Voiceland was looking for a new high performance and highly available database for its new VoIP Telephony SIP Platform. Key requirements included:

- Compatible with both **Cassandra & PostgreSQL**
- Able to run on **GCP, AWS, and on-premises**
- **Easily integrates** with other technologies, including OpenSIPS, CGRates, Apache Kafka, and Hasura, in use in the platform
- **Open source**

## YUGABYTE SOLUTION

A unified database solution for all of Voiceland's needs

Tested and validated to integrate with the following open source projects

Enables a multi-cloud architecture, including GCP, AWS, and on-premises data centers in Greece

100% open source including enterprise features normally lacking in other solutions

“

With YugabyteDB VOICELAND S.A. is now able to offer a better SLA to our customers world-wide using a global distributed database schema for our new VoIP Telephony SIP Platform. Our core services are now distributed around the world and even if there is a disaster in one data center our SIP Platform will continue to operate as normal and your business will never miss a call! Also our cloud-native applications can now rapidly grow in the cloud or on premises and stay GDPR compliant without vendor lock-in.
