### Bath & North East Somerset CCG

Following our successful work with Bath and North East Somerset PCT we were asked to create a website for the new formed local Clinical Commissioning Group (CCG). Although the site content itself was fairly straight forward timescales and cross platform accessibility were key.

To meet the tight deadline Webcurl leveraged a lot of Drupal 7's in built functionality. This allowed us to produce a platform that met the CCG's immediate needs as well as providing scope for future enhancements once the site was live.

The accessibility requirement was met by the implementation of an adaptive theme. This resulted in a site that changes its look and feel according to the device it is being viewed on.
