

Weihong Works Seamlessly and Efficiently with Intel vPro® Technology

Weihong Technology is a leading enterprise in the design and manufacturing of industrial control systems. With the robust Intel vPro® platform for business, powered by the 12th Gen Intel® Core™ Processor, the Sunlogin Remote Control solution from Shanghai Beirui Information Technology, is equipped for powerful business performance. The professional industrial design software enables Weihong designers to work seamlessly and efficiently to deliver on time and helps the company be on the product leading edge in their industry. Whether it's for device management or product development projects, Intel® Hardware Shield technology provides Weihong with built-in hardware-level security protection. It also protects operating systems, programs running, and downloads from cyberattacks and ensures the security of a company's local core business data and information.
