Customer Success Report

Payment Gateway Software Category

Payment gateway software facilitates transactions by communicating transaction information and thus it is similar to physical point of sale used in retail outlets. The platform authorizes credit card and other payments for e-commerce ventures, conventional stores, brick-and-click shops, and online retailers. It protects credit card details by encrypting the confidential information. This procedure ensures secure transmission of private details between the merchant and customer.

Resolve at its core improves traditional and cumbersome b2b payments. They facilitate deferred payments between businesses, but in a way that benefits both businesses. Resolve takes care of every aspect of a business being able to offer net terms...
